

**Planetary Science and Astrobiology Seminar Series
2006 Winter-Spring Schedule**

January 12	Neal Evans , University of Texas “Highlights from the Cores to Disks Spitzer Legacy Program”
January 24 and 26	Atrium Poster Sessions
February 2	Vladimir Krasnopolsky CUA “Some Problems Related to the Origin of Methane on Mars”
February 23	Jessica Sunshine , SAIC, UMD “Why we Wacked a Comet: Results from The Deep Impact Experiment to 9/P Tempel 1
March 9	Keith Noll , Space Telescope Science Institute, “Solar System Binaries”
April 6	Hal Weaver , JHU/Applied Physics Laboratory “Investigation of a Quadruple System: New Horizons Heads for Pluto”
April 20	George Cody , Geophysical Laboratory, Carnegie Inst. Of Washington “The History of the Early Solar System as Recorded in Extraterrestrial Organic Matter”
May 4	Murthy Gudipati , Ames Research Center/University of Maryland "Ionization Processes in Cryogenic Water Ices: Relevance to Solar System and Interstellar Ices"
May 18	A. W. Castleman , Penn State University Title to be announced
June 1	Karl Hibbitts , JHU/Applied Physics Laboratory “CO ₂ in the Surfaces of the Galilean and Saturnian Satellites from Galileo/NIMS and Cassini/VIMS Observations”
June 15	Ted Kostiuk , GSFC/Planetary Systems Laboratory “Stratospheric Winds on Titan: What We Know Now”
